

SAPC 11177
COPY 1 OF 2

November 19, 1956

George:

I have just received and read a copy of message 1281 from WRSP 2 (Detachment B) dated November 2, 1956. This message concerns Hand Control #113. If I recall correctly you and I had discussed this message by telephone earlier this month and had decided that when spare units were available a turn around would be made.

I wish to point out with respect to paragraph two of the reference message that return of the View Finder is not desired or requested. Further, the difficulty with the Hand Control #113 may not be readily apparent to WRSP 2 but the existence of the slight binding is indicative of possible future trouble. With respect to paragraph three there have been delivered three spare Hand Controls and two spare View Finders to date. The third spare View Finder will be delivered this month. All these units were delivered to Maywood, however, they were not marked as system spares and I suspect that EFM has used them to fill the gaps created by the return of units for repair.

Paragraph four indicates a desire by Detachment B to have a spare unit on hand. Your choice as to whether to hold the unit in depot or ship to the detachment rests in your hands.
